

## 1. Aiving SA

We have developed software that takes raw data gathered from ice skaters and provide them with real-time metrics. These metrics are utilised by coaches and skaters for performance improvement and injury prevention.

## 2. Healium

Healium is a med-tech startup revolutionizing chronic disease management. we are developing Medicaase, a smart pill dispenser that ensures precise dosing and provides remote treatment monitoring, enhancing patient autonomy and caregiver efficiency. Partnering with leading healthcare institutions, Healium advances safe and effective treatment adherence solutions.

## 3. Bioscibex

Bioscibex is a biotech startup focused on developing advanced bioreactors for optimized cell culture processes. With a commitment to innovation, we collaborate with industry leaders to drive breakthroughs in bioprocessing.

## 4. Circea

Circea's mission is to upcycle biogenic CO2 emissions which are side-streams from industrial processes of fermentation (wine, beer) or anaerobic digestion (biogas), into valuable products in the agri-food and chemical industries.

## 5. Juvion Life Sciences

Reduced locomotor function or mobility is a debilitating hallmark of human aging, often linked to distinct degeneration in motor circuitry—the communication between neurons and muscles.

## 6. Converr

Converr makes client acquisition ridiculously fast and smart. In minutes, not days, you can generate hyper-relevant leads with LinkedIn profiles, manage your pipeline with a one-click CRM, and launch tailored campaigns straight from your Outlook. Powered by an AI Agent, Converr handles everything from prospecting to engagement, so you can focus on closing deals—not chasing leads.

## 7. Starforge

We are developing a new approach to untargeted mass spectrometry based on novel signal processing and AI techniques. This approach allows users to filter meaningful signal from noise and identify metabolites and other molecules in their data which would previously have been undetectable.

## 8. Althea Engineering

Althea Engineering is an innovative technology start up specializing in Virtual Reality (VR) solutions for healthcare and mental well-being. Our mission is to leverage cutting-edge VR technology, biometric sensors, and AI-driven analytics to create immersive, therapeutic experiences that help users manage stress, anxiety, and cognitive disorders.

## 9. Hevelion

We enable the discovery of spatial biomarkers through automated analysis of private and public spatial omics data, to advance research for cancer, autoimmune disorders, and neurodegenerative diseases.

## 10. coprod Sarl

coprod develops an ecosystem of robotics components designed to be easy to use and modular to accelerate the time to market and reliability of future robots.

## 11. Resilient

Resilient is a Swiss digital health startup that aims to prevent employee burnout using AI and wearable technology. Their STOA solution combines biometric data from wearables with contextual and behavioral data to assess burnout risk. It provides personalized coaching to employees and anonymized insights to employers, helping reduce burnout-related.

## 12. LinkK

LinkK is a pre-launch startup offering immersive interactions with fictional characters powered by AI, in partnership with HES-SO ARC.

## 13. EdgeVitals

EdgeVitals' rVSM is a computer vision and Edge AI powered solution for contactless monitoring of vital signs like HRV, SpO2, blood pressure.
